

Orthopedic Physical Therapy

Policy: Treatments/Interventions

Staff physical therapists direct the treatment strategies for each individual patient in accordance with their physician physical therapy prescription (as applicable), guided by evidence-based practice; ongoing knowledge obtained through continuing education courses; established physical protocols and through guidelines established by the American Physical Therapy Association Guide to Practice.

Treatments may be carried out by a licensed physical therapy assistant, with patient consent, under the direct supervision of a licensed physical therapist.

Please refer to <http://guidetopractice.apta.org> and the following pages for possible interventions/treatments included throughout the episode of care.
